SUMMARY

Fourth-year Computer Engineering student seeking a long-term software engineering internship for the Spring 2027 semester. Independently developed Flutter and Spring Boot projects and managed design, development, testing and release end to end, including 4 mobile apps published on Google Play and the App Store with over 2,000 combined downloads. Collaborated on course, research and hackathon projects, earning first place in a team hackathon. I focus on root-cause analysis, validating solutions through testing and measurement, and taking ownership from development to delivery.

EDUCATION

B.Sc. in Computer Engineering (English-medium) 2022 – 2027 (expected)

Abdullah Gül University, Kayseri

- Fourth-year student. Coursework: Data Structures & Algorithms, Object-Oriented Programming & Design Patterns, Operating Systems, Computer Networks, Database Management Systems, Software Development Life Cycle & Agile.

EXPERIENCE

Research Intern – Robot-Mounted Visual Tracking System Jul 2026 – Aug 2026

Abdullah Gül University, Kayseri (hybrid) – under Asst. Prof. Khaled Hejja

- Co-authored a journal manuscript on a camera-based pan-tilt tracking system mounted on a quadruped robot; it has passed the initial check and is under peer review at the Journal of Materials and Mechatronics: A.
- Together with my team, designed and built the robot and its tracking system (Raspberry Pi 5 with OpenCV vision, Arduino for servo control); took part in the mechanical assembly, testing and image-processing work.
- Wrote a digital twin of the system to validate experiments in simulation; tested neural-network-based controllers, found bugs that prevented target lock, and compared them against a classical controller.

PROJECTS

Selware – Independent Mobile App Studio 2025 – Present

Flutter · Dart · Firebase · RevenueCat · AdMob | selwareapps.com

- Design, develop, publish and maintain my own apps end to end, including store listings, privacy policies, in-app purchases and ads, and policy compliance.
- 4 apps live on both Google Play and the App Store (2,000+ total downloads across both stores): Finansel (personal budget tracking and analytics), Ezan Vakitleri (prayer times), Adaş (name meanings and origins) and Pip & Pop (two-player games).

Study Room – Real-Time Shared Study Room 2026

Java 21 · Spring Boot · WebSocket (STOMP) · Redis · PostgreSQL · React · TypeScript · Docker | Live demo · GitHub

- Account-free shared Pomodoro room in the browser: live room state and a server-validated timer in Redis, session history in PostgreSQL; live sync over WebSocket, anonymous JWT identity, and authorization where only the room's creator can change the lengths; 44 tests, live on Render + Neon.

Gams N' Roses – Optimization Game **Hackathon 1st place** · 2026

*Team project · **1st place, Gamification for Optimization Hackathon** | GitHub*

- Game where players pick the best city for a concert venue, combining optimization, location analysis and gamification.
- Contributed to the game's visual assets and backend; worked with the team on every part of the process, including ideation, testing and the presentation.

AI-Generated Image Detection 2026

Python · OpenCV · scikit-learn · NumPy · FFT · LBP | GitHub

- Explainable, lightweight feature-extraction pipeline that separates generative-AI images from real photos.

Secure Email System 2025

Python · AES / RSA / SHA-256 · Socket Programming | GitHub

- Encrypted email client/server with hybrid AES + RSA encryption and SHA-256 integrity checks over sockets.

TECHNICAL SKILLS

Languages: Dart, Python, Java, C, SQL, JavaScript, TypeScript
Mobile & Backend: Flutter, Firebase, Spring Boot, PostgreSQL, Redis, WebSocket, Docker, Node.js, REST APIs, Socket Programming
Vision & ML: OpenCV, scikit-learn, NumPy
Embedded & Tools: Arduino, Raspberry Pi, Git, GitHub, Linux
Spoken Languages: Turkish (native), English (B2, upper-intermediate)
